

Donor Supported Programs

Interpretation Services

Ours is a very diverse region and the needs of our children and families are often complicated with other challenges such as not speaking English. Our fully donor-supported interpretation services help make receiving services more accessible and easier to understand, helping make new families feel welcome and supported.

Sophie's Place

A collaborative team of police, victim services workers, and social workers helps victims of physical and/or sexual abuse (up to age 15) in a safe and compassionate environment, reducing trauma while supporting trust, healing, and resilience.

Hydrotherapy Pool

Enables easy access for children of all ability levels, helping them develop motor skills, independence, and communication skills. The pool's warmer water makes therapy easier, relaxing muscles while helping build muscle strength and improve balance. A smaller pool is also more accessible for those with sensory sensitivities (autism).

Feeding Team

Supports some of the most medically involved and youngest children whose feeding safety is compromised due to developmental disabilities. A specialized team provides feeding assessments, recommendations on positioning, equipment and food, and works with children to develop skills for safe swallowing.

Casting & Splinting

Custom casts and splints are made to correctively support arm/leg position and/or help overcome activity limitations (difficulty standing, walking). New custom casts/splints are regularly made to support children's growth & developmental progress. This service is provided to families free of charge (average cast/splint can cost about \$700-800).

Equipment Team

Customizing children's mobility devices to make the most of each child's unique mobility needs. Our team works with the child, their family, therapists, physicians, hospitals, and equipment suppliers to meet the child's functional positioning/mobility needs and goals, and monitor for growth and physical changes.
